

Medical Education

On-demand education from anywhere

Skilled healthcare practitioners need to keep abreast of new developments and share knowledge. On-demand, remote learning is a practical solution.

Practitioners require medical education to maintain their medical licenses. Gaining access to high-quality, continuous medical education is often difficult. Isolation is the enemy, as specialists have less and less time to interact with one another to exchange ideas and experiences. Travel to educational events disrupts service provision and is costly.

Collaborative video and audio solutions make it much easier for practitioners to undertake continuing medical education (CME). Sessions can be joined from wherever they are, even using mobile technology such as tablets. This means less time is wasted traveling and events can be scheduled into their work week more easily.

Through our technology and alliance partnerships, you have the ability to record educational events and attendance can be delivered on demand. Rich media applications also allow the user to download content and audio tracks, or see the combined event as a video package.

With Polycom, you can provide training and support for medical procedures and surgery from anywhere in the world. This remote mentoring will improve your practitioner skills in ways that previously would be impractical.

More educational opportunities and ongoing mentoring provide an effective way to attract and retain top talent.

- Improved CME results in improved patient outcomes and reduced costs.
- Patient education is instrumental in reducing admissions.
- Staff training ensures efficient workflow and drives productivity.

Key benefits of Polycom for medical education

- Increased access to medical education from anywhere improves skill levels and reduces costs
- Enhanced opportunities for specialists to interact and exchange experience
- Live feeds of procedures provide an in-person experience for practitioners, improving their skill levels over video
- Larger audiences can easily attend at one time
- Greater availability of staff for mentoring and advice
- Live video distributed to any location provides invaluable insight to latest practices

Karolinska University Hospital Sweden recently has launched an innovative surgery program. Using Polycom® RealPresence® to view live video, researchers at the medical university can provide remote mentoring at other hospitals anywhere in the world. These live sessions are invaluable real-time training opportunities.

Polycom healthcare product showcase

NEED	PRODUCT	BENEFIT
Best-in-class telemedicine experiences	Polycom® RealPresence® Group Series 	Open standards-based video system that can integrate easily into your workflows and HIPPA-compliant, encrypted HD audio, video and content makes the doctor/patient experience feel like an in-person visit

Featured products

- Polycom RealPresence Group Series
- Polycom® RealPresence Centro™
- Polycom RealPresence Web Suite

Benefits

- Expanded specialist reach to rural pediatric patients
- Reduced travel time and costs for patients
- Anesthesiologist collaboration and training

“When we use Polycom, we remove the distance barrier, so I’m able to provide the same level of care to patients who live four hours away as those who live forty minutes away. And this technology allows me to be in more than one place at a time.”

— Dr. Shayla Sullivant, Child and Adolescent Psychiatrist, Children’s Mercy Hospitals and Clinics
